

Good, clean fun

Anti-Bacterial Playground Equipment

Safer Playgrounds By Playground Centre

At Playground Centre, we're all about healthy fun. That's why we're proud to offer a select range of play equipment that can be made with anti-bacterial polymers. Across the world, there has never been a sharper focus on hygiene and infection control measures. Anti-bacterial materials can bring much-needed peace of mind for parents, teachers, carers and communities.

Adventurous play and exposure to certain germs are essential to support childhood development, great memories and robust immune systems. Now there's a smart way to make shared fun safer in your community or school as a specifier, Council representative, or school administrator.

Bacteria-busting polymer

We can incorporate anti-bacterial polymers during manufacture, providing constant and ongoing protection for the product's lifetime. We can do this for select parts of our playground equipment, that are made from plastic, e.g. crawling tunnels, slides and barrier panels. The polymers have been independently tested and proven to decrease the presence of surface bacteria, and are especially effective against staph infections that cause fevers, rashes and blisters in children.

Goodbye mould, algae... and pong

These polymers are also proven to significantly reduce the growth of mould and algae. In especially wet, shaded or humid environments, this provides real ongoing benefits – helping to prevent not only discolouration and associated odours, but also making areas less prone to be slippery and unsafe. Extremely strong, durable and heat resistant – to withstand years of rough and tumble, the polymers come with Playground Centre's anti-fade warranty.

Non-toxic and proven effective

Often used in medical environments, the active ingredient is non-toxic and approved by the FDA (US Food and Drug Administration).

Imagine these high-traffic and high-touch areas now being "more hygienic", "cleaner" and "safer"!
